

Java

```
class Solution {  
    public long minInitialStrength(int[] monsters, int[][] boosts) {  
  
    }  
}
```

JavaScript

```
/**  
 * @param {number[]} monsters  
 * @param {number[][]} boosts  
 * @return {number}  
 */  
var minInitialStrength = function(monsters, boosts) {  
  
};
```

TypeScript

```
function minInitialStrength(monsters: number[], boosts: number[][]): number {  
  
};
```

C++

```
class Solution {
```

```
public:
    long long minInitialStrength(vector<int>& monsters, vector<vector<int>>& boosts) {

    }
};
```

C#

```
public class Solution {
    public long MinInitialStrength(int[] monsters, int[][] boosts) {

    }
}
```

Kotlin

```
class Solution {
    fun minInitialStrength(monsters: IntArray, boosts: Array<IntArray>): Long {

    }
}
```

Go

```
func minInitialStrength(monsters []int, boosts [][]int) int64 {

}
```
